

1. What are the most challenging aspect of the coursework task?
2. How did you go about completing the task?
3. What have you learned over the course of completing this coursework task?

Ans: First, I took some idea from given pdf file and video given by college. Some understanding was hard in video because it was short description but in instruction file there is description of each merge sort. Merge sort is Divide and Conquer algorithm. It divides the input array into two halves, calls itself for the two halves, and then merges the two sorted halves. My brother also helps me to do this assignment because it was difficult for me.

It was far better than others college because I have learned many things. Got experience by listening and learning from given videos and file. Improvement of research as well.

Sorry for late submission sir I got high fever so I took rest and done in late I hope you will forgive me.
